

# FCC RF TEST REPORT

ISSUED BY  
Shenzhen BALUN Technology Co., Ltd.

FOR  
**TPMS Activation and Diagnostic Tool**

ISSUED TO  
Launch Tech Co., Ltd.

Launch Industrial Park, North of Wuhe Road, Banxuegang Industrial Zone, Longgang District, Shenzhen City, Guangdong Province, China

Tested by: Xia Long  
Xia Long  
(Engineer)

Date: Sep. 27, 2018

Approved by: Wei Yanguan  
Wei Yanguan  
(Chief Engineer)

Date: Sep. 28, 2018

Report No.: BL-SZ1880149-601

EUT Name: TPMS Activation and Diagnostic Tool

Model Name: CRP 429TPMS(refer section 2.4)

Brand Name: LAUNCH

Test Standard: 47 CFR Part 15 Subpart C

FCC ID: XUJCRP429TPMS

Test Conclusion: Pass

Test Date: Aug. 25, 2018 ~ Aug. 31, 2018

Date of Issue: Sep. 28, 2018

*NOTE: This test report of test results only related to testing samples, which can be duplicated completely for the legal use with the approval of the applicant; it shall not be reproduced except in full, without the written approval of Shenzhen BALUN Technology Co., Ltd. BALUN Laboratory. Any objections should be raised within thirty days from the date of issue. To validate the report, please contact us.*

### Revision History

| Version        | Issue Date           | Revisions   |
|----------------|----------------------|---|
| <u>Rev. 01</u> | <u>Sep. 21, 2018</u> | <u>Initial Issue</u>  |
| <u>Rev. 02</u> | <u>Sep. 28, 2018</u> | <u>Remove the Test Antenna-Rod (9K-30M) on page 8.update the RE test data (9K-30M) on page 14,15.</u> |

## 1 GENERAL INFORMATION

### 1.1 Identification of the Testing Laboratory

|              |   |
|--------------|---|
| Company Name | Shenzhen BALUN Technology Co., Ltd.   |
| Address      | Block B, 1st FL, Baisha Science and Technology Park, Shahe Xi Road, Nanshan District, Shenzhen, Guangdong Province, P. R. China |
| Phone Number | +86 755 6685 0100   |

### 1.2 Identification of the Responsible Testing Location

|                           |   |
|---------------------------|---|
| Test Location             | Shenzhen BALUN Technology Co., Ltd.   |
| Address                   | Block B, 1st FL, Baisha Science and Technology Park, Shahe Xi Road, Nanshan District, Shenzhen, Guangdong Province, P. R. China   |
| Accreditation Certificate | <p>The laboratory has been listed by Industry Canada to perform electromagnetic emission measurements. The recognition numbers of test site are 11524A-1.</p> <p>The laboratory is a testing organization accredited by FCC as a accredited testing laboratory. The designation number is CN1196.</p> <p>The laboratory is a testing organization accredited by American Association for Laboratory Accreditation(A2LA) according to ISO/IEC 17025.The accreditation certificate is 4344.01.</p> <p>The laboratory is a testing organization accredited by China National Accreditation Service for Conformity Assessment (CNAS) according to ISO/IEC 17025. The accreditation certificate number is L6791.</p> |
| Description               | All measurement facilities used to collect the measurement data are located at Block B, FL 1, Baisha Science and Technology Park, Shahe Xi Road, Nanshan District, Shenzhen, Guangdong Province, P. R. China 518055   |

### 1.3 Laboratory Condition

|                           |                    |
|---------------------------|--------------------|
| Ambient Temperature       | 20°C to 25°C       |
| Ambient Relative Humidity | 45% to 55%         |
| Ambient Pressure          | 100 kPa to 102 kPa |

### 1.4 Announce

- (1) The test report reference to the report template version v2.5.
- (2) The test report is invalid if not marked with the signatures of the persons responsible for preparing and approving the test report.
- (3) The test report is invalid if there is any evidence and/or falsification.
- (4) The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein.
- (5) This document may not be altered or revised in any way unless done so by BALUN and all revisions are duly noted in the revisions section.

- (6) Content of the test report, in part or in full, cannot be used for publicity and/or promotional purposes without prior written approval from the laboratory.

## 2 PRODUCT INFORMATION

### 2.1 Applicant Information

|           |   |
|-----------|---|
| Applicant | Launch Tech Co., Ltd.   |
| Address   | Launch Industrial Park, North of Wuhe Road, Banxuegang Industrial Zone, Longgang District, Shenzhen City, Guangdong Province, China |

### 2.2 Manufacturer Information

|              |   |
|--------------|---|
| Manufacturer | Launch Tech Co., Ltd.   |
| Address      | Launch Industrial Park, North of Wuhe Road, Banxuegang Industrial Zone, Longgang District, Shenzhen City, Guangdong Province, China |

### 2.3 Factory Information

|         |     |
|---------|-----|
| Factory | N/A |
| Address | N/A |

### 2.4 General Description for Equipment under Test (EUT)

|   |  |
|---|--|
| EUT Name                                  | TPMS Activation and Diagnostic Tool  |
| Model Name Under Test                     | CRP 429TPMS  |
| Series Model Name                         | Pilot TPMS   |
| Description of Model name differentiation | All models are same with electrical parameters and internal circuit structure, but only different on the color of enclosure and model name, each of model has various of colors for enclosure. |
| Hardware Version                          | N/A  |
| Software Version                          | N/A  |
| Dimensions (Approx.)                      | N/A  |
| Weight (Approx.)                          | N/A  |

## 2.5 Ancillary Equipment

|                       |                   |          |
|-----------------------|-------------------|----------|
| Ancillary Equipment 1 | Battery           |          |
|                       | Brand Name        | EPT      |
|                       | Model No.         | 18650    |
|                       | Serial No.        | N/A      |
|                       | Capacity          | 4000 mAh |
|                       | Rated Voltage     | 3.7 V    |
|                       | Limited Voltage   | 4.2 V    |
| Ancillary Equipment 2 | DC Power Line     |          |
|                       | Length (Approx.)  | 0.8 m    |
| Ancillary Equipment 3 | Diagnosis of Line |          |
|                       | Length (Approx.)  | 1.5 m    |

## 2.6 Technical Information

|                                   |  |
|-----------------------------------|--|
| Network and Wireless connectivity | WIFI 802.11b, 802.11g, 802.11n(HT20/40)<br>125KHz Transmit, 315MHz, 433MHz Receive |
|-----------------------------------|--|

The requirement for the following technical information of the EUT was tested in this report:

|                     |  |
|---------------------|--|
| Operating Frequency | 110~205 kHz  |
| Product Type        | <input type="checkbox"/> Mobile<br><input checked="" type="checkbox"/> Portable<br><input type="checkbox"/> Fix Location |
| Antenna Type        | PIFA Antenna   |
| Antenna Gain        | 0.93 dBi   |

### 3 SUMMARY OF TEST RESULTS

#### 3.1 Test Standards

| No. | Identity  | Document Title   |
|-----|---|--|
| 1   | 47 CFR Part 15,<br>Subpart C<br>(10-1-16 Edition) | Intentional Radiators  |
| 2   | ANSI C63.10-2013                                  | American National Standard for Testing Unlicensed Wireless Devices |

#### 3.2 Verdict

| No. | Description                  | FCC Rule         | Test Verdict | Result    |
|-----|------------------------------|------------------|--------------|-----------|
| 1   | Radiated Emission            | 15.209,15.215(b) | Pass         | Annex A.1 |
| 2   | Conducted Emission, AC Ports | 15.207           | Pass         | Annex A.2 |
| 3   | 20 dB Bandwidth              | 15.215(c)        | Pass         | Annex A.3 |

#### 3.3 Test Uncertainty

The following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2. This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of  $k=2$ .

| Measurement                        | Value   |
|------------------------------------|---------|
| Conducted emissions (9 kHz-30 MHz) | 3.23 dB |
| Radiated emissions (30 MHz-1 GHz)  | 4.30 dB |
| Radiated emissions (1 GHz-18 GHz)  | 4.81 dB |

## 4 GENERAL TEST CONFIGURATIONS

### 4.1 Test Environments

|                            |                         |                |
|----------------------------|-------------------------|----------------|
| Relative Humidity          | 45% to 55%              |                |
| Atmospheric Pressure       | 100 kPa to 102 kPa      |                |
| Temperature                | NT (Normal Temperature) | +22°C to +25°C |
| Working Voltage of the EUT | NV (Normal Voltage)     | 3.7 V          |

### 4.2 Test Equipment List

| Description                              | Manufacturer               | Model                 | Serial No. | Cal. Date  | Cal. Due   |
|--|----------------------------|-----------------------|------------|------------|------------|
| EMI Receiver                             | ROHDE&SCHWARZ              | ESRP                  | 101036     | 2018.06.21 | 2019.06.20 |
| Test Antenna-<br>Loop(9 kHz-30<br>MHz)   | SCHWARZBECK                | FMZB 1519             | 1519-037   | 2017.11.07 | 2019.11.08 |
| Test Antenna-<br>Bi-Log(30<br>MHz-3 GHz) | SCHWARZBECK                | VULB 9163             | 9163-624   | 2018.07.11 | 2019.07.10 |
| Anechoic<br>Chamber                      | EMC Electronic Co.,<br>Ltd | 20.10*11.60*7<br>.35m | N/A        | 2018.08.08 | 2019.08.07 |
| EMI Receiver                             | ROHDE&SCHWARZ              | ESRP                  | 101036     | 2018.06.21 | 2019.06.20 |
| LISN                                     | SCHWARZBECK                | NSLK 8127             | 8127-687   | 2018.06.21 | 2019.06.20 |
| Shielded<br>Enclosure                    | ChangNing                  | CN-130701             | 130703     | N/A        | N/A        |

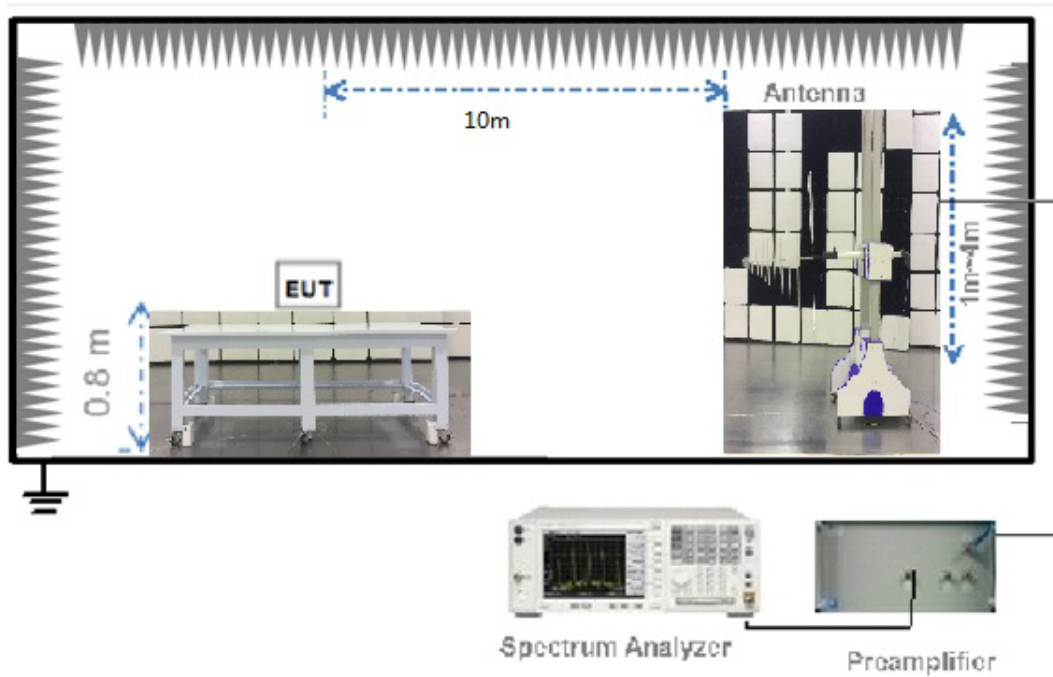

### 4.3 Test Setups

#### Test Setup 1

For Radiated Emission Test (Below 30 MHz))

#### Test Setup 2

(For Radiated Emission Test (30 MHz-1 GHz))

### Test Setup 3

(For Conducted Emission, AC Ports Test)

## 5 TEST ITEMS

### 5.1 Emission Tests

#### 5.1.1 Radiated Emission

##### 5.1.1.1 Limit

| Frequency (MHz) | Field Strength ( $\mu\text{V/m}$ ) | Measurement Distance (m) |
|-----------------|------------------------------------|--------------------------|
| 0.009 - 0.490   | 2400/F(kHz)                        | 300                      |
| 0.490 - 1.705   | 24000/F(kHz)                       | 30                       |
| 1.705 - 30.0    | 30                                 | 30                       |
| 30 - 88         | 100                                | 3                        |
| 88 - 216        | 150                                | 3                        |
| 216 - 960       | 200                                | 3                        |
| Above 960       | 500                                | 3                        |

NOTE:

- 1) Field Strength ( $\text{dB}\mu\text{V/m}$ ) =  $20 \cdot \log [\text{Field Strength } (\mu\text{V/m})]$ .
- 2) In the emission tables above, the tighter limit applies at the band edges.
- 3) For above 1000 MHz, limit field strength of harmonics: 54  $\text{dB}\mu\text{V/m}@3\text{ m}$  (AV) and 74  $\text{dB}\mu\text{V/m}@3\text{ m}$  (PK)
- 4) At frequencies below 30 MHz, measurements may be performed at a distance closer than that specified in the regulations, when performing measurements at a closer distance than specified, the results shall be extrapolated to the specified distance by either making measurements at a minimum of two distances on at least one radial to determine the proper extrapolation factor or by using the square of an inverse linear distance extrapolation factor (40 dB/decade). For example, at the frequency 9 kHz, limit @10m =  $20 \cdot \log (2400/f) + 40 \log (d_{\text{limit}}/d_{\text{measure}})$  where limit = 300m,  $d_{\text{measure}}=10\text{m}$ . limit @10m =  $20 \cdot \log (2400/9) + 40 \log (300/10) = 107.5$  ( $\text{dB}\mu\text{V/m}$ ).
- 5) At frequencies at or above 30 MHz, measurements may be performed at a distance other than what is specified provided, When performing measurements at a distance other than that specified, the results shall be extrapolated to the specified distance using an extrapolation factor of 20 dB/decade (inverse linear-distance for field strength measurements; inverse-linear-distance-squared for power density measurements). For example, at the frequency 30 MHz, limit @10m =  $20 \cdot \log (100) + 20 \log (d_{\text{limit}}/d_{\text{measure}})$  where limit = 3m,  $d_{\text{measure}}=10\text{m}$ . limit @10m =  $20 \cdot \log (100) + 20 \log (3/10) = 29.5$  ( $\text{dB}\mu\text{V/m}$ ).

##### 5.1.1.2 Test Setup

Refer to 4.3 section (test setup 1 to test setup 2) for radiated emission test, the photo of test setup please refer to ANNEX B.

##### 5.1.1.3 Test Procedure

All Spurious Emission tests were performed in X, Y, Z axis direction. And only the worst axis test condition was recorded in this test report.

An initial pre-scan was performed in the chamber using the EMI Receiver in peak detection mode. Quasi-peak measurements were conducted based on the peak sweep graph. The EUT was measured by Bi-Log antenna with 2 orthogonal polarities.

##### 5.1.1.4 Test Result

Please refer to ANNEX A.1.

## 5.1.2 Conducted Emission

### 5.1.2.1 Test Limit

| Frequency range<br>(MHz) | Conducted Limit (dB $\mu$ V) |          |
|--------------------------|------------------------------|----------|
|                          | Quasi-peak                   | Average  |
| 0.15 - 0.50              | 66 to 56                     | 56 to 46 |
| 0.50 - 5                 | 56                           | 46       |
| 5 - 30                   | 60                           | 50       |

NOTE:

- 1) The limit is applicable to Class B ITE.
- 2) The lower limit shall apply at the band edges.
- 3) The limit decreases linearly with the logarithm of the frequency in the range 0.15 - 0.50 MHz.

### 5.1.2.2 Test Setup

Refer to 4.3 section test (test setup 3) for conducted emission, the photo of test setup please refer to ANNEX B.

### 5.1.2.3 Test Procedure

The EUT is connected to the power mains through a LISN which provides 50  $\Omega$ /50  $\mu$ H of coupling impedance for the measuring instrument. The test frequency range is from 150 kHz to 30 MHz. The maximum conducted interference is searched using Peak (PK), Quasi-peak (QP) and Average (AV) detectors; the emission levels that are more than the AV and QP limits, and that have narrow margins from the AV and QP limits will be re-measured with AV and QP detectors. Tests for both L phase and N phase lines of the power mains connected to the EUT are performed.

Devices subject to Part 15 must be tested for all available U.S. voltages and frequencies (such as a nominal 120 VAC, 50/60 Hz and 240 VAC, 50/60 Hz) for which the device is capable of operation. A device rated for 50/60 Hz operation need not be tested at both frequencies provided the radiated and line conducted emissions are the same at both frequencies.

### 5.1.2.4 Test Result

Please refer to ANNEX A.2.

### 5.1.3 20 dB Bandwidth

#### 5.1.3.1 Limit

FCC §15.215(c)

The 20 dB bandwidth is known as the 99% emission bandwidth, or 20 dB bandwidth ( $10 \cdot \log 1\% = 20$  dB) taking the total RF output power.

#### 5.1.3.2 Test Setup

Refer to 4.3 section test (test setup 1) for test setup description for the antenna port. The photo of test setup please refer to ANNEX B.

#### 5.1.3.3 Test Procedure

Use the following spectrum analyzer settings:

Span = approximately 2 to 3 times the 20 dB bandwidth, centered on a hopping channel

RBW  $\geq$  1% of the 20 dB bandwidth

VBW  $\geq$  RBW

Sweep = auto

Detector function = peak

Trace = max hold

The EUT should be transmitting at its maximum data rate, Allow the trace to stabilize.

#### 5.1.3.4 Test Result

Please refer to ANNEX A.3.

## ANNEX A TEST RESULTS

### A.1 Radiated Emission

Note <sup>1</sup>: The symbol of “--” in the table which means not application.

Note <sup>2</sup>: For the test data above 1 GHz, according the ANSI C63.4-2014, where limits are specified for both average and peak (or quasi-peak) detector functions, if the peak (or quasi-peak) measured value complies with the average limit, it is unnecessary to perform an average measurement.

Note <sup>3</sup>: The test was carried out in the ten meter anechoic chamber.

#### QI Test Data and Plots

##### A.1.1 Test Antenna Vertical, 9 kHz –30 MHz

| No. | Frequency (MHz) | Results (dBuV/m) | Factor (dB) | Limit (dBuV/m) | Over Limit (dB) | Detector | Table (o) | Height (cm) | ANT      | Verdict |

| 6   | 893.542         | 29.51            | -7.34       | 36.0           | -6.49           | Peak     | 281.00    | 100         | Horizontal | Pass    |

## A.2 Conducted Emission

Note: Devices subject to Part 15 must be tested for all available U.S. voltages and frequencies (such as a nominal 120 VAC, 50/60 Hz and 240 VAC, 50/60 Hz) for which the device is capable of operation. So, The configuration 120 VAC, 60 Hz and 240 VAC, 50 Hz were tested respectively, but only the worst configuration (120 VAC, 60 Hz ) shown here.
